

HOMEOPATHIC SPIKE DETOX

****Disclaimer: This homeopathic spike detox has not been evaluated by Health Canada or the FDA. The homeopathic spike detox protocol is not intended to diagnose, treat, cure, or prevent any disease.**

The Homeopathic Spike Detox was created for those suffering from Long COVID and COVID-19 vaccinate-induced injury. A team of Medical & Wellness Professionals are conducting an ongoing study utilizing the new, s1 Immune Subset spike protein blood test. As part of this study, they are looking at both immediate outcomes and long term outcomes in symptom reduction and return to health, both PRE-COVID positive long-hauler symptoms and PRE-COVID vaccination. The majority of our cases report significant improvement in symptoms within the first 3 to 4 days of each protocol. There are no side effects, drug interactions, or adverse reactions with this type of Homeopathy; the protocol either works dramatically or there is little change in symptoms. Some participants may feel mild detox symptoms such as flu like symptoms, headache, or rash. These are normal detox symptoms usually pass within 3 days as the body is releasing toxins. Testing with the s1 blood test is highly recommended and has shown the spike protein is being removed from the monocyte after two rounds or 8 protocol doses. Testing can be ordered through docintheloop.com There are four parts to the protocol. They are:

- Protocol A*- Helps with breathing, lung issues, heart issues, swelling, water retention.
- Protocol B*- Helps with digestive issues, flu symptoms, upset stomach, diarrhea, burning discharge.
- Protocol C*- Helps with tremors, cramping, menstrual issues, joint pain, brain fog, neuropathy, spasms, chronic fatigue.
- Protocol D*- Helps with fever, rash, kidney issues, throat problems, radiation effects.

This is a systems protocol, and each protocol is taken just once a week for 8 weeks. It's important that each protocol is taken exactly 7 days apart in order from A-D! There are four small sucrose pellets per vial (Protocol) that dissolves in the mouth sub-lingually. The pellets are taken all together at the same time as a single dose. It is advised not to touch the pellets with your hands, instead pour directly into the mouth from the vial. Take each dose 1/2 before or 1/2 hour after eating or drinking anything and wait 1/2 before eating a drinking anything. (even water!) Coffee, peppermint, alcohol, and other homeopathic remedies should be avoided the day of each Protocol. These substances interfere with Homeopathy and could impact a positive outcome. Any electronic devices, specifically cell phone should be avoided and or removed at the time of taking each Protocol. It is recommended to take activated charcoal for a few days after each protocol if you experience any detox symptoms. For Case Study Participants that are currently experiencing severe symptoms we recommend using a Homeopathic Drainage product to help with lymph drainage and organ support along with this Protocol such as #258 or Unda Chelidonium Plex.

Children and Animals take 3 pellets per vial (Protocol) following the same instructions above.

Ingredients: Sucrose Carrier (Homeopathic Grade Sugar Pellets)
